Increasing access to capital in developing economies with Credix & USDC

THE CHALLENGE
Businesses in developing economies have limited access to traditional banking services

Businesses rely on dependable access to capital with ongoing liquidity to scale and drive economic growth. But in much of the world, many borrowers face insurmountable, triple digit interest rates and limited options for capital providers when sourcing credit. Even borrowers with healthy cash flows and growing businesses could find themselves at the mercy of concentrated local or regional banking systems with limited capacity or willingness to lend. The World Bank estimates only 15% of SMEs in Latin America have access to formal credit.1

Meanwhile, institutional and accredited investors around the world search for new and less tightly correlated portfolio diversification opportunities.

Access to yield-generating credit investments in developing economies are often difficult or impossible to access through local institutions and bureaucratic funds; the few that are available offer limited opportunities as they rely on a handful of global banks and a considerable chain of counterparties. This creates an inefficient market, as viable companies seek loans and global investors ready to lend struggle to connect, due to the antiquated existing financial infrastructure not designed as a global, equitable platform.

THE OPPORTUNITY
Connecting investors with investments in developing economies can strengthen local growth & generate unique returns

Despite the challenges, fintech lending is growing rapidly in Latin America, with the sector expected to reach $63 billion by 2025 generating 3.2 million new jobs, according to a report by the Inter-American Development Bank.2

Digital currencies like USDC change the way money moves around the world, making it easier to aggregate capital and make business transactions that can settle in seconds and typically cost just a few cents. Decentralized applications, like Credix, provide a global portal for connecting investors to opportunities all over the world.

HOW CIRCLE HELPED

USDC

CIRCLE ACCOUNT

LIQUIDITY
Meanwhile, fintech lenders in emerging markets have managed to find their footing, developing specialized knowledge about their local markets and building relationships that can streamline underwriting and help businesses grow. Using alternative data sources and machine learning algorithms to assess creditworthiness more accurately, fintech companies have begun to provide loans at more affordable rates than many traditional lenders while eliminating much of the credit risk associated with emerging market investments.

Together, these innovations facilitate a more fairly distributed, borderless flow of capital that unlocks new sources of yield for investors.

“As we were looking for our preferred stablecoin to move value globally, connecting investors in the US and Europe with opportunities in Latin America in near to real-time, our first choice of stablecoin was USDC,” said Credix Chief Growth Officer Chaim Finizola. “We were familiar already with USDC and understood from previous experience working with banks it was their stablecoin of choice. Given our focus in regulatory compliance, we decided to move forward with USDC.”

**THE SOLUTION**

**USDC & Circle help simplify financing arrangements & payouts while streamlining cross-border transactions**

Credix relies on USDC and the Circle Account to send funds and receive scheduled payments using USDC. This efficiency allows Credix’s fintech lending partners in emerging markets and end borrowers to focus on origination and putting capital to work. Directly involved parties and local economies benefit from the simplicity and transparency of public blockchain infrastructure and the power of programmable dollars.

With the Circle Account, Credix and their platform investors effortlessly manage their USDC across a growing list of supported blockchain networks and simplify redemptions to local fiat currency. As Credix scales and more investors and non-bank lenders join its ecosystem, the true potential of digital currencies for cost-effective, seamless cross-border transactions is only just being realized.

“Most of the investors and non-bank lenders, the first time, don’t even believe the speed and cost efficiency that comes with it. It’s really rewarding to see the smiles on people’s faces when they’re doing that first transaction on the platform; people get really excited about it” said Credix Chief Growth Officer Chaim Finizola.

Talk with our partnership team today to see how USDC and Circle solutions can work for your business.
